Main characteristics/features

Sumatera Koerintji Arabica coffee (Kopi Arabika Sumatera Koerintji) is a light-bodied coffee with an excellent aroma and taste. Its flavour blends lemon, chocolate and caramel, and is dominated by its sweetness and acidity.

Geographical area

The Sumatera Koerintji Arabica coffee area is located at the foot of Mount Kerinci, mainly in the Mount Tujuh sub-district, and in Kayu Aro and West Kayu Aro in the Kerinci regency.

Production/processing

Production begins with the provision of seeds, land preparation, planting, crop maintenance and harvesting. Harvesting is carried out by hand, selectively picking 90 % red cherries and 10 % yellow cherries. These are then sorted, either by hand or by using water, to separate the green, damaged, rotten and floating cherries. The red cherries are then pulped, sorted and washed with water to remove the skin, hollow coffee shells and other impurities. They are then fermented for 12-36 hours. The beans are washed again to remove the mucilage, and dried until they reach a moisture content of 12 %.

Link between product and territory

Sumatera Koerintji Arabica coffee grows at an altitude of 1 400-1 800 masl. The area is cool and mountainous, with slopes and bumpy terrain. Average rainfall is about 130.9 mm/month with an average of 14 rain days per month. The dominant soil type in the Kerinci regency is andosol, which covers an area of 275 755 ha, or 65.65 % of the region. Other soil types include latosol (88.704 ha or 21.12 %), podzolic, alluvial, inceptisol, oxisol, and vertosol. The andosol soil type in this region has a sandy, dusty and rough texture. Historical and cultural factors, together with social customs, have contributed to the development and conservation of this coffee.
