

Name | **Vinh Orange**
Country | Vietnam

Date of registration

31/05/2007

Source: NOIP

Main characteristics/features

Vinh oranges are juicy and sweet, and have a characteristic aroma.

Geographical area

The Vinh orange production areas are located in Nghi Dien, Nghi Hoa communes of Nghi Loc district; Hung Trung commune of Hung Nguyen district; Nghia Binh, Nghia Hieu, Nghia Hong, Nghia Lam, Nghia Son communes of Nghia Dan district; Minh Hop commune of Quy Hop district; Tan An, Tan Long, Tan Phu communes of Tan Ky district, in Nghe An province, Vietnam.

Production/processing

Planting season: in spring (February to April) or autumn, but the best time is in spring or the rainy season.

Watering: after planting, water the trees two or three times to create favourable conditions for root development. In places with watering systems, pay attention to watering the tree as it buds or after fertilisation.

Harvesting: once one third to one half of the fruits have started to ripen, harvesting can begin. Use scissors to cut the fruits from the stem, thereby avoiding damage to the plant and to the fruit's peel.

Link between product and territory

The specific quality of the Vinh orange depends mainly on natural conditions (land topography, rainfall, air humidity and evaporation, soil properties and soil micronutrient content) as well as on the impact of the people employing traditional cultivation techniques.
