#### Main characteristics/features

#### Geographical area

Khẩu Tan Đón rice is white, with grain length of near 0.5 to 0.65cm and a strong aroma. The rice has carbohydrate content of 68.5% to 70.5% and amylose content of 2.5% to over 3.5%. After being cooked, the rice becomes sticky and soft, has a buttery sweet taste and leaves an essential oil layer on the phrynium placentarium or banana leaf wrapping.

Villages of Ngoang, Thẩm, and Bô of Thẩm Dương communes, Văn Bản district, Lào Cai province.

#### Production and processing

#### Link between product and territory

Variety: "Khẩu Tan Đón" rice. Seed are planted in April, at the density of 25 kilogram of seeds per acre. Rice is harvested in November when it is ripe and 100% of rice seeds turn yellow. Harvested rice is dried, impurities and pests are removed then stored at dry places.

Thẩm Dương Khẩu Tan Đón rice is grown in the valley between two major mountains. Therefore, the weather is special with relatively high amplitude of temperature variation between day and night, which is the determining factor to the quality of rice during the blooming and granulating stages.
