#### Main characteristics/features

#### Geographical area

Mang Yang "Ba Chăm" rice grains have oblong shape, the grain belly is slightly round, opaque white and has a peculiar aroma. Cooked "Ba Chăm" rice of Mang Yang district has gel consistency of 46mm - 139mm, Amylose content of 3.62% - 19.98%. The aroma is like that of glutinous rice but fainter.

Communes of Đăk Trôi, Đê Ar, Kon Chiêng, Kon Thụp, and Lơ Pang of Mang Yang district, Gia Lai province

#### Production/processing

#### Link between product and territory

The rice is planted by pothole method. The seeds will be directly planted into the pothole unsoaked and the hole will be covered by a thin layer of soil. The high moisture in the soil will accelerate the spout sequence, and it will continue to develop there until harvest, which is also the end of the rainy season. Harvest is done in November when at least 85% of the grains on the cornflower turn yellow.

The production area of "Ba Chăm" rice in Mang Yang district is a sunken field on the altitude of 700m – 1,000m, the temperature variance between day and night in blooming months (September to October) is 9 - 10 degree Celsius, humidity is always above 80% during the cultivation season (April to November). The geographical area has abundant underground water. Moreover, the cultivation season coincides with the rainy season. As such, the soil in the geographical area has high moisture of 60 - 70% during the cultivation season.
