### Main characteristics/features

### Geographical area

Yên Bái “Bát Độ” bamboo shoot product, including fresh shoots, pickled shoots, salted shoots, and dried shoots. Fresh bamboo shoots have the sweetness of the shoots when cooked. When eaten, it is crunchy with no excess fibre threads nor pungent smell. Raw fibre content is 0.22 to 0.72 g/100g; Amino acid content is 3.53 to 3.61 mg/kg. Pickled bamboo shoots have no excess fibre threads. Raw fibre content is 0.4 to 0.82 g/100g. Salted bamboo shoots when cooked have the sweetness of the shoots, moderate saltiness, and slight sourness. When eaten, it is crunchy with no excess fibre threads. Raw fibre content is 0.4 to 0.68 g/100g. Dried bamboo shoot threads have the strong sweetness of the shoots when cooked. When eaten, it has no excess fibre threads.

Communes of Kiên Thành, Hồng Ca, Hưng Khánh, Lương Thịnh, Tân Đông of Trấn Yên district; communes of An Bình, Mậu Đông, Đông An, Tân Hợp, Lâm Giang of Văn Yên district; communes of Xuân Lai, Yên Thành, Mỹ Gia, Cảm Nhân of Yên Bình district; communes of An Phú, Động Quan, Tô Mậu, Mường Lai, Minh Chuẩn of Lục Yên district, Yên Bái province.

### Production/processing

### Link between product and territory

The high amount of rainfall and prolonged rainy season, especially during the development and harvest of bamboo shoots (May to September) result in the low fibre thread count of Yên Bái “Bát Độ” bamboo shoot. High temperature variance between day and night contributes to the natural aroma and sweetness of Yên Bái “Bát Độ” bamboo shoot. It is within the range of 7 – 13 °C, stimulating the accumulation of Amino acids, metabolism and aromatic phenol accumulation in bamboo shoot and tree. The main soil types of the area are Ferralic Acrisols and Oxisols. The soil has a thick weathered layer of over 0.8 metre. Also, the high forest coverage in the area results in less washouts and corrosions, suitable for biological needs of “Bát Độ” bamboo shoot.
