### Production/processing

### Link between product and territory

The producers have a particular know how of keeping the traditional honey with the indigenous bee species, combining with the techniques of keeping bees in the natural forests and use no antibiotics, etc. All of these elements have resulted in the peculiar characteristics of Mù Cang Chải honey.

The forest area is large, the soil consists of mostly Ferrasols, thick and rich in humus and organic matters. These conditions are favourable for the development of plants for honey bees such as Blong song, pommerac, lanxangia tsaoko, crabapple, etc.
